

Nutrazu Aquatic

Omnivore Gel

Aquatic Omnivore Gel is formulated to be fed as a complete diet to omnivorous aquarium fish, such as anthias, discus, clown fish, damsels and lumpsuckers, and to crustaceans such as crabs. It can be supplemented with natural foods if required.

When made up as a gel, **Aquatic Omnivore Gel** can be delivered in many forms—as a single mass, crumbled, chopped or grated into small pieces, painted on to aquarium furniture or pressed into crevices, to provide feeding enrichment and activity.

When properly mixed and fed in appropriate quantities, the gel will not cloud the water or overload life support systems.

Aquatic Omnivore Gel also includes pigmenting agents to help to maintain fish colouring and appearance.

The diet is presented as a dry powder, which forms a gel when mixed for one minute with equal amounts of hot water. The water to be used should have been boiled and left to cool slightly for one minute. The mixture should be poured into flat trays or containers such as ice cube trays and cooled overnight in a refrigerator (4°C). Gel can be used from the refrigerator for 3 days, or be frozen for later use, and frozen gel can be chopped or grated before thawing.
