

Elasmobranch Tablets

Zoovet Products **ELASMOBRANCH TABLETS** are a vitamin/mineral supplement to assist in counteracting dietary deficiencies in captive sharks and rays fed on frozen fish or invertebrate diets. They are intended to replace the vitamins lost during the storage, freezing and thawing of natural foods.

The formulation is similar to **AQUAVITS**, but with lower levels of fat-soluble vitamins and higher levels of iodine and vitamin C, which are essential to protect against goitre and promote strong cartilage growth in captive animals.

Recommended dosage is:

1 ELASMOBRANCH TABLET per 250g of fish fed.

The tablets should be inserted into the food fish before the sharks and rays are fed.

AQUAMINIVITS are a suitable alternative for smaller sharks and rays.

ELASMOBRANCH TABLETS are available from the address below in bottles of 500 or 1000 x 1.5g tablets. The tablets are scored in the middle to facilitate accurate dosing.

ELASMOBRANCH TABLET Specification:
