

Emcelle

Natural Vitamin E Supplement

(For Elephants, Rhino and Large Herbivores)

Emcelle Natural Vitamin E Supplement is a clear water-dispersible Vitamin E solution specially formulated for mixing into drinking water, liquid diets or for top dressing dry feeds. It contains 500 IU of d-alpha-tocopherol per ml.

Emcelle Natural Vitamin E Supplement is a natural source and biologically active form of Vitamin E that does not need to be hydrolysed prior to absorption in the body. This makes it especially appropriate for exotic species that are deficient in the enzyme needed to absorb other Vitamin E sources.

Emcelle Natural Vitamin E Supplement is suitable to use in all large herbivores such as elephants, rhinoceros, camelids and giraffe and is easily administered without wastage.

A dose rate of just 0.1ml per 50kg bodyweight is recommended in exotic herbivores.

The product should be added to the feed at the time of feeding. It is not intended to be mixed into feeds and stored for extended periods of time, due to the natural instability of Vitamin E.

Emcelle Natural Vitamin E Supplement is available from the address below in 1litre bottles. It should be stored at room temperature or under refrigeration.
