

Herbivore Calcium

HERBIVORE CALCIUM is a mineral supplement formulated to provide the optimum calcium/phosphorus ratio of 1.8:1 for all herbivorous animals, particularly reptiles.

Fed regularly as part of a properly formulated diet, **HERBIVORE CALCIUM** will ensure that the correct mineral balance is achieved where a complete natural diet cannot be provided. Correct levels of calcium and phosphorus in the diet are vital for bone and tooth development, blood clotting, nerve and muscle function and energy utilisation. Deficiencies or an incorrect balance of these minerals may cause serious disease or skeletal deformities.

Our recommendations for the daily dose of **HERBIVORE CALCIUM** to be added to a vegetarian diet are as follows:

One 1ml scoop per 4kg bodyweight daily

One 2.5ml scoop per 10kg bodyweight daily

One 5ml scoop per 20kg bodyweight daily

One 10ml scoop per 40kg bodyweight daily

1g **HERBIVORE CALCIUM** per 4kg bodyweight per day

HERBIVORE CALCIUM is available from the address below in three convenient sizes, all complete with measures – 250g, 500g, and an economical 2kg bucket pack. Larger pack sizes can be supplied on request.

HERBIVORE CALCIUM contains dicalcium phosphate and calcium carbonate.
