

Vitamin

D3 and E in oil

Vitamin D₃ and E in oil is a nutritional supplement specially formulated for use in New World monkeys. Each ml contains 10 000 i.u. Vitamin D₃ with the addition of 125 i.u. Vitamin E. This product replaces Vitamin D₃ in oil.

Supplementation of Vitamin D₃ is important in New World monkeys, particularly when deprived of natural sunlight, to prevent the development of nutritional bone disease. The Vitamin E helps to prevent problems associated with Vitamin D₃ deficiency, and promotes good skin condition.

Our dosage recommendations are as follows:

Marmosets and tamarins

1000 i.u. D₃ (3 drops once weekly)

Cebid monkeys

2000 i.u. D₃ (3 drops twice weekly)

Vitamin D₃ and E in oil has a low viscosity allowing easier dosing, even in very small animals where the product can be accurately measured in an insulin syringe before oral administration. It is available from the address below packaged in protective 30ml and 100ml re-seal amber bottles.

Vitamin D₃ and E in oil specification:

Per 1ml

Vitamin D₃ : 10 000 i.u.

Vitamin E: 125 i.u.

Base oil: Coconut oil
