

Zoovet Colour Feed Supplement

Zoovet Colour Feed Supplement is a fine powdered dietary supplement designed to provide extra pigment precursors for birds with natural yellow-red feather colouring based on carotenoids, when these are not sufficiently available in their captive diets.

The powder contains high levels of the natural pre-cursor beta-carotene and the synthetic canthaxanthin (found naturally in crustaceans) which, when incorporated into birds' feathers through the diet, provide the bright red colour seen in breeding scarlet ibis, storks, flamingos and pelicans.

Zoovet Colour Feed Supplement should be fed throughout the year, but at higher levels during the moult to enrich the colour of new growing feathers.

Dosage

For maintenance, mix at 1% of the daily feed intake (10 grams powder per 1kg feed), and during the moult at 2% (20 grams powder per 1kg feed).

Shelf life

12 months from manufacturing date.

Availability

Zoovet Colour Feed Supplement is available from Zoovet Products as a fine white powder, packed in 1kg plastic screw top pots, with a 10 gram scoop.

Analysis per kg

Canthaxanthin	1000mg
---------------	--------

Beta-carotene	150mg
