

Carnivore Calcium

CARNIVORE CALCIUM is a mineral supplement formulated to provide the optimum calcium/phosphorus ratio of 3:1 for all carnivorous animals, (e.g. cats, birds of prey, monitor lizards).

Fed regularly as part of a properly formulated diet, **CARNIVORE CALCIUM** will ensure that the correct mineral balance is achieved where a complete natural diet cannot be provided. Correct levels of calcium and phosphorus in the diet are vital for bone and tooth development, blood clotting, nerve and muscle function and energy utilisation. Deficiencies or an incorrect balance of these minerals may cause serious disease or skeletal deformities.

Our recommendations for the daily dose of **CARNIVORE CALCIUM** to be added to a meat diet are as follows:

One 1ml scoop per 6kg bodyweight daily

One 2.5ml scoop per 15kg bodyweight daily

One 5ml scoop per 30kg bodyweight daily

One 10ml scoop per 60kg bodyweight daily

1g **CARNIVORE CALCIUM** per 6kg bodyweight per day

CARNIVORE CALCIUM is available from the address below in four convenient sizes, all complete with measures – 250g, 500g, 2kg and an economical 10kg bucket pack. Larger pack sizes can be supplied on request.

CARNIVORE CALCIUM contains dicalcium phosphate and calcium carbonate.
