Zoovet CARNIVORE CALCIUM

MINERAL SUPPLEMENT

For carnivorous animals

Zoovet CARNIVORE CALCIUM is a mineral supplement formulated to provide the optimum calcium/phosphorus ratio of 3:1 for all carnivorous animals, (e.g. cats, birds of prey, monitor lizards). Fed regularly as part of a properly formulated diet, **Zoovet CARNIVORE CALCIUM** will ensure that the correct mineral balance is achieved where a complete natural diet cannot be provided. Correct levels of calcium and phosphorus in the diet are vital for bone and tooth development, blood clotting, nerve and muscle function and energy utilisation. Deficiencies or an incorrect balance of these minerals may cause serious disease or skeletal deformities.

Zoovet CARNIVORE CALCIUM contains Dicalcium Phosphate and Calcium Carbonate.

Dosage: Our recommendations for the daily dose of **Zoovet CARNIVORE CALCIUM** to be added to a meat diet are as follows:

One 1ml scoop per 6kg bodyweight daily
One 2.5ml scoop per 15kg bodyweight daily
One 5ml scoop per 30kg bodyweight daily
One 10ml scoop per 60kg bodyweight daily

1g **Zoovet CARNIVORE CALCIUM** per 6kg bodyweight per day.

Zoovet CARNIVORE CALCIUM is available to purchase as an off-white powder, packed in tubs of 500g or 1.5kg. Each tub is supplied with measuring scoops allowing exactly the required amount to be reconstituted thus avoiding waste.

Handling and Storage: Wash hands after use. Store in a cool, dry place (below 25°C) away from direct heat and sunlight. Not for human consumption. Keep out of reach of children.
