Zoovet NATURAL VITAMIN E

For Elephants, Rhinoceros, Camelids, Giraffe and all Large Herbivores

Zoovet NATURAL VITAMIN E is a clear water-dispersible Vitamin E solution specially formulated for mixing into drinking water, liquid diets or for top dressing dry feeds. It contains 500IU of D-alpha-tocopherol per ml.

Zoovet NATURAL VITAMIN E is a natural source and biologically active form of Vitamin E that does not need to be hydrolysed prior to absorption in the body. This makes it especially appropriate for exotic species that are deficient in the enzyme needed to absorb other Vitamin E sources.

Zoovet NATURAL VITAMIN E is suitable to use in all large herbivores such as elephants, rhinoceros, camelids and giraffes and is easily administered without wastage.

Handling and Storage: This product should be added to the feed at the time of feeding. This product is not intended to be mixed into feeds and stored for extended periods of time, due to the natural instability of Vitamin E. Wash hands after use. Store in a cool, dry place (below 25°C) away from direct heat and sunlight. Or refrigerate and avoid freezing. Not for human consumption. Keep out of reach of children.

Additives (per litre)

Vitamin E as D-alpha-tocopherol 500,000IU

Composition

Soya Bean Oil

Analytical Constituents

Moisture <1%, Ash <1%, Protein <1%, Fibre <1%, Oil 99.9%

Dosage: Feed at a daily rate of 1IU per kg body weight. **Zoovet NATURAL VITAMIN E** can be mixed into liquid feeds, top dressed onto dry feeds at the time of feeding, or mixed into drinking water.

0.1ml per 50kg body weight
